

DATACENTER HOSTING SERVICES

DataCenter
SOLUTIONS

Overview

From the heart of Kuwait City, a certified Tier III brand-new state of the art data center was built by ITS. An ambitious MEED awarded project of the year in 2021. Hosts two phases of work with 1,200 sq meter and with more than 500 cabinets. The Datacenter provides 99.98% certified uptime gold operations of SLA.

Data Center Features

ITS proposes 40 years of emerging experience which enable us to build top notch datacenter with assertive quality of services. With our hyperscale offering, Datacenter services will no longer be neither IT nor finance headache. Our facility provides our customers businesses with a one-stop shop for all their IT and capacity requirements. Built in a campus style design, hyperscale facilities allow our customers to grow with IT services rapidly within the same location. This enables scalability of data storage and capacity rapidly to meet ever-fluctuating demand.

Data Center Design and Capabilities

The design of ITS datacenter was built with full redundancy system for all layers like power, cooling, connectivity and infrastructure to achieve the highest availability and ensure the business continuity for our customers. It features an end-to-end dual path power distribution, flexible power capacity, redundant diesel generators, and Automatic Transfer Switch (ATS)! These features, among enhanced technologies, help maintain the temperature and humidity, and balance out the cooling range of the DC to ensure noninterrupted services for our customers.

We are Accredited

ITS Data Center the only certified commercial DC holds TIER III design, facility and operations and licensed by CITRA to provide hosting and cloud services.
