

Datacenter Solutions

Datacenter Service

Building your Datacenter

ITS Datacenter Services is the answer to your challenges as an integration umbrella for your systems and applications services.

ITS Services understand your requirements from the datacenter facility (**Customer - Premises , ITS - Premises or hybrid**), up to higher tiers of several cross-platforms, ensuring that topping applications run smoothly for the business users wherever they are at. ITS datacenter services help you re-engineer datacenter infrastructure, applications, governance and service management framework; align operational capacity with business objectives and outcomes; and making your customers realize the full potential of their investments.

Building your Datacenter as per your business needs

Many corporates face a number of datacenter challenges:

- ◆ Deliver the right service levels to their consumers,
- ◆ Provide required changes in capacity and functionality quickly enough to support new business initiatives,
- ◆ Reduce operational costs,
- ◆ Ensure the compliance of technology management with legislation, regulations and standards.

These objectives can be hard to achieve without an expert advisory backed up with technically capable resources. We can help you realize your goals. With our practical advice, you can chart the best way forward, building on our expertise as one of the industry's leading service providers.

Business Enablement & Growth

At each step of your challenge, ITS resources are on-hand to support your in-house experts. ITS Services work hand-in-hand with you to optimize your information assets, governance controls and datacenters. Alternatively, we can offer a managed services over your datacenter systems and applications for specific functionalities to achieve the desired SLA (Service level Agreements) and efficiencies needed by your business and executive management.

DC

Business continuity of services that you provide to your customers, business partners and business users is at the heart of your information technology strategy, which means it is essential to have an uncomplicated services to manage your environment as well as service providers that understand the needs of your business. End-to-end delivery of infrastructure and application services may not always be provided from under one roof – in fact, it's almost a certainty that several providers is usually involved in a modern datacenter setup – so how do you ensure everyone along the value chain understands their role and accountability?
